The Artificial Intelligence (AI) Institute is a collaboration between the DCDT, Tshwane University of Technology and the University of Johannesburg.

Cabinet said that the first-of-its-kind institute ushers a new era in South Africa's digital transformation efforts.

"It will stimulate economic growth, address unemployment and create a positive social impact. The AI Institute will expand the teaching of robotics and coding currently being offered in public schools," Cabinet said.

Cabinet said that the institute is designed to ensure that government academia and industry work together in a unique partnership to apply their collective knowledge, expertise and experience to implement coordinated solutions to some of South Africa and Africa's most critical and long-standing challenges, and to take the continent forward.

Government's focus on digital skills includes creating platforms to support and promote the ability of youth, and small and medium enterprises, in particular start-ups, to develop digital content.

## National Digital and Future Skills Conference

Cabinet has further welcomed the outcomes of the National Digital and Future Skills Conference held in Umhlanga, KwaZulu-Natal from 22 to 23 November 2022, to strengthen the nation's advances in the area of digital and future skills in South Africa.

The conference was hosted by the Department of Communications and Digital Technologies (DCDT) in partnership with the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ).

It aimed to, among others, strengthen partnerships in the area of digital and future skills in South Africa, create and stimulate interest in digital and future skills, and explore digital skills training opportunities available for youth presented by the Fourth Industrial Revolution.

"The conference forged partnerships between government, business, civil society, international development organisations and youth organisations to take our nation forward into the digital era," Cabinet said on Thursday.
